### **DETAILED ACTION**

This is in response to the Applicant's response filed on April 30, 2009. Claims 1 – 4, 8, and 17 – 22 have been cancelled by the Applicant. Claim 5 has been amended by the Applicant. Claims 5 – 7 and 9 – 16, where Claim 5 is in independent form, are presented for examination.

#### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on April 30, 2009 has been entered.

#### ***Allowable Subject Matter***

Claims 5 – 7 and 9 – 16 are allowed.

The following is an examiner's statement of reasons for allowance: (See also Applicant's Remarks filed on April 20, 2009).

Nagaoka (U.S. Appl. 2002/0180579) discloses a home network management system where a home network management facility provides a web interface for controlling electronic devices connected to a home server in a home network to a remote user [Fig. 1; Abstract]. The home network management facility comprises a

Art Unit: 2453

customer management database that stores information related to a user's remote terminal, user's security level, user's home network, etc. [Figs. 4 and 6], a terminal information database that stores the remote terminal's display capability, communication capability, and communication standard [Fig. 8], and a server information database that stores home network identification and home network communication standards [Fig. 10]. The system uses the information stored in the databases to facilitate the remote access and control of the electronic devices in the home network based on at least user access levels, communication capabilities of the home network and remote terminal, and user authentication [Figs. 11 and 13].

Thorsteinsson (U.S. Appl. 2003/0105854) discloses a system and method for accessing and commanding remote devices (i.e. home devices) through a web interface provided by a central portal server which provides a conflict resolution mechanism that can override an existing request on a home device if a subsequent request on the home device is determined to have higher priority than the existing request [Fig. 15; Para. 0072].

Baba (U.S. Patent 5,758,057) discloses a system and method for allowing access to remote devices by a plurality of users where each user is predetermined to have a particular priority so that when a plurality of users access the same device simultaneously, the user with higher priority obtains access prior to the user with lower priority [Abstract; Fig. 1; Col. 8, Lines 31-42].

Humpleman (U.S. Patent 6,198,479) discloses a system and method for commanding and controlling home devices connected to a home network using a web interface where the capabilities of each home device are read and displayed on the web interface to the user [Fig. 11; Col. 2, Lines 31-47].

Frank (U.S. Patent 6,026,150) discloses a home network where the plurality of consumer devices connected to a home network can be controlled by another one of the plurality of consumer devices connected to the home network through a network protocol [Fig. 1; Col. 2, Line 53 – Col. 3, Line 16].

Humpleman (U.S. Patent 6,005,861) discloses a home network that provides interconnectivity of home devices and external networks to provide a variety of different services to the home network user using a single user interface [Fig. 1; Col. 2, Lines 3-26].

Regarding Claim 5, the combination as claimed where the remote service unit includes a mechanism for reducing burden on the device control processing unit, when multiple remote terminals simultaneously submit requests to the remote terminal service unit resulting in a collision between the submitted service requests, by performing operations with higher associated priority first and servicing requests from terminals with higher assigned priority first wherein the information regarding the priorities associated

Art Unit: 2453

for request operations, local devices, and remote terminals are stored in the profile database is not disclosed, suggested, or rendered obvious by the prior art of record.

Claims 6, 7, and 9 – 16 depend from allowed Claim 5 and, therefore, are also allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
